

Child Support Agency Leverages Real-Time Data to Strengthen Key Performance Metrics

Save Time and Money while Increasing Collections

Background

The Kentucky Child Support Enforcement Agency ("Kentucky CSE," or the "Agency") is the state's administrative agency responsible for statewide child support enforcement. Kentucky CSE is responsible for overseeing Kentucky's 120 county child support offices, each office responsible for child support enforcement in that jurisdiction. County offices are held accountable to—and are assisted by—Kentucky CSE's Central Office.

When individuals seeking child support services complete an application, a case is created and subsequent measures are taken towards the end goal of the non-custodial parent (NCP) providing monetary or medical support to his or her dependent children. Depending on the individual case needs, these measures may include locating a parent, establishing paternity, assigning/garnishing wages, collections, and, freezing bank accounts, seizing assets, suspending professional licenses, suspending driver records and passports and tax interception. Kentucky CSE supports these efforts through the administration of the Title IV-D Child Support Program, a federal statute that entrusts each state with the responsibility of providing aid and services to families and children in need, with the help of federal grants (64% of the program is federally funded).

Program Challenges

A primary function of most child support agencies is locating NCPs. In Kentucky, locating NCPs was a challenging, time-consuming, and expensive exercise for the agency's overexerted staff.

The agency found that many of the NCPs that they were searching for could not efficiently be located using traditional methods. The tactics being used to locate NCPs were inefficient—fraught with manual operations and expired and/or incomplete data. One method involved faxing local sheriffs' offices to request data confirmation—sometimes taking days, even weeks when dealing with an out of state agency, until a response was received before enforcement action could be taken. These antiquated processes led to many errors that made it difficult for the staff to do their jobs effectively, and in turn, left many children and families without the support they deserve. These inefficiencies were also costing the state valuable dollars that could have been allocated to other priorities. The Agency needed an improved, reliable method for locating NCPs

CHALLENGES:

- Lacked a consistent and reliable method for locating incarcerated NCPs
- Staff burdened with time-consuming manual processes
- Responses to jail/prison inquiries took days to weeks
- Lack of accurate and timely incarceration data to strengthen child support enforcement

APPRISS SOLUTION:

- Locate and monitor NCPs through all phases of incarceration
- Enhanced CSE agency efficiencies
- Increase child support case closure rates
- Make improvements against federal performance measures
- Ease financial burden on taxpayers

that provided comprehensive, accurate, and current data in order to further the agency's child support enforcement goals.

Selecting Appriss Safety

After a thorough needs assessment and comprehensive market research, Kentucky CSE determined that access to real-time incarceration data would be highly beneficial to locating NCPs. The Agency selected Appriss Safety to implement a highly effective, data-driven solution to address their inefficient search-and-locate practices.

Appriss Safety is a leading data integration company that operates the nation's most comprehensive and current incarceration data network, with direct jail management system interfaces to over 2,000 jails and DOC facilities. Appriss' Incarceration Intelligence solution gives agencies access to accurate, real-time data that allows agencies to quickly search for, locate, and monitor NCPs, with the end goal of increasing child support payments.

The Solution

Appriss Safety teams partnered with Kentucky CSE to define the criteria and scope of services necessary to effectively locate and monitor NCPs moving in and out of the prison system. Appriss modelled the process, provided training, and recommended best practices for the most effective utilization of the solution. The program launched with approximately 10 Kentucky users within CSE's parent locate section; within one year, the program has expanded to nearly 400 users, with managers in each regional office providing access for their staff.

Appriss Safety serves Kentucky CSE through a direct web service. Through this web service, the Agency has the ability to search for or create "watches" against their NCP population. Data available to the Agency through the web service includes, but is not limited to: last name, first name, middle name, social security number, date of birth, race code, sex, incarceration start date, incarceration end/release date, and facility site. The frequency and accuracy of Appriss' data contributes to a more efficient search-and-locate process, in turn, increasing collections and implementing effective order modifications.

Data elements from Appriss are reported in compliance with state file requirements, transmitting files, testing transmissions, and modifying processes as required to ensure effective transmission of monthly extract data. Appriss provides the agency with a project manager and other professional resources to provide ongoing research support to state employees who use this data to assess plan members for suspension of eligibility.

Impacting ROI: Incarceration Intelligence Solution

Appriss' Incarceration Intelligence solution has largely decreased the amount of time and resources that Kentucky CSE officials spend locating NCPs who are in various stages of the incarceration lifecycle. According to the Agency, the time spent searching for each individual NCP has gone, generally, from weeks

Agencies are able to place "watches" on their beneficiary lists, and receive alerts when a monitored beneficiary is:

Booked into custody

Released from custody

Incarcerated for a certain "length of stay"

The Appriss Safety Incarceration Intelligence solution is the most valuable tool in our child support enforcement arsenal.

Jacob van der Oort
Kentucky Division of Child Support

to minutes. Additionally, having the ability to access necessary information via a central data source has eliminated the information barriers that greatly impeded the success of past processes (e.g., having to call multiple facilities, awaiting responses, etc.).

Staff in all 120 counties now have more time to devote to meeting new clients, attending court dates, and pursuing other NCPs who are more difficult to locate. Offices with limited resources now have the ability to reduce their workload, and more-equipped offices can process large caseloads more efficiently.

Successfully Locating NCPs

Nearly 400 Kentucky Division of Child Support staff utilize the Appriss Incarceration Intelligence solution to search for, monitor, and locate NCPs.

The benefits of Appriss' Incarceration Intelligence solution have ultimately strengthened Kentucky's statewide performance in each of the five key measures established by The Child Support Performance and Incentive Act (1. Paternity Establishment Percentage, 2. Support Order Establishment, 3. Current Collections, 4. Arrearage Collections, 5. Cost-Effectiveness). This is very important. The stronger a state's performance metrics, the more federal funding the state receives.

Jacob van der Oort with the Kentucky Division of Child Support, summarized the Agency's experience: "The Appriss Safety Incarceration Intelligence solution is the most valuable tool in our child support enforcement arsenal."

From January 1 to March 31, 2018, Appriss Incarceration Intelligence supported:

22,736
searches

1,025
watches

414
watch hits

About Appriss® Safety

Appriss Safety is the developer of the Appriss Insights Platform, the nation's most comprehensive source of incarceration, justice, and risk intelligence data. We are a team of technology and data science experts who provide insights and analytic solutions that support informed decisions for early response to people-driven fraud and risk. By delivering real-time notifications, context-sensitive risk assessments, and actionable insights, we enable government agencies and commercial enterprises to save lives, fight crime, prevent fraud, and manage risk.

For more information, visit ApprissSafety.com.

rev 5/08

In just 90 days, Kentucky CSE was able to locate 40% (414) of its "watched" NCPs.
