

## **VINE Feature Spotlight: What's a VINELink Account?**

For states on the most recent version of VINE, people who use the service can now create a VINELink account!

### **Q: So, what is a VINELink account?**

A VINELink account is a username and password-protected account where you can keep track of your registrations and VINELink information in one central place.

### **Q: What features does an account provide?**

When you have an account, you can quickly access all your VINELink registrations. If you receive a notification, you can access your account and view more information about that offender's record. Or, if you'd like, even delete that registration or create another.

You'll also be able to create a Watch List, where you can keep tabs on the current custody status of an offender or, where court information is provided, a court case without registering for notification.

You can save important service provider and victim resource information to your account that you may want to access later, as well.

And, of course, you will have the option to review and manage your account details any time.

### **Q: Are the accounts confidential?**

VINELink accounts are 100% confidential. Only you will know how to log in to your account and access your information. Information provided during registration (such as an email address or phone number) is only viewable to our support team in the event you need assistance.

### **Q: Do I have to create the account on my computer?**

Not at all! While you can of course access VINELink and its account features from your computer, you can also sign up from your phone or tablet.

### **Q: How do I sign up?**

On your state's page, click Create Account and start your account creation today!
